DETAILED ACTION

Claim Objections

Claim 21 is objected to because of the following informalities. In claim 21, line 11, "thread" should be inserted after "entry" and before ";" to avoid confusion. Appropriate correction is required.

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, "the threaded head portion having a double entry" must be shown or the feature canceled from the claim. No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement-drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the examiner does not accept the changes, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 21-54 are rejected under 35 U.S.C. 103(a) as being unpatentable over Talos et al. (US 5,709,686) in view of Thompson (US 4,580,225).

Talos et al. disclose a bone plate having isolated or separated protrusions 3 having the same pitch as threads 9 on the head of a bone screw 6 (Figs. 1 and 5 and col. 2, lines 26-67).

Talos et al. disclose all elements of the claimed invention except for a double entry thread.

Thompson teaches providing multiple entry threads such as double entry threads on a threaded shank for providing quick engagement between the threaded shank and the mating part (col. 1, lines 14-23).

Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have provided double entry threads on the head of screw 6 and corresponding threads 3 on the mating part or bone plate for quick engagement between the screw and the bone plate.

Regarding claims 24 and 37, each of openings 2 have a first area with threads and a second area without threads.

Regarding claims 25, 38 and 49, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided a number of protrusions between 2 and 30, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233.

Response to Arguments

Applicant's arguments submitted under "REMARKS" in the response filed on September 10, 2007 have been fully considered.

Applicant's arguments with respect to the rejections of claims 21-54 under 35 USC 112 first paragraph are persuasive. Accordingly, the Examiner is withdrawing these rejections.

Applicant's arguments with respect to the objection to the drawings are not persuasive because an applicant for a patent is required to furnish a drawing where necessary for understanding of the subject matter sought to be patented (see 37 CFR 1.81).

New grounds of rejection have been introduced in this office action.
